

Streaming Industry KPI Dashboard (2018–2024)

This report analyzes streaming KPIs from 2018–2024 across 5 major platforms:

Netflix (NFLX), Amazon Prime Video (AMZN), Disney+ (DIS), WBD, and Apple TV+ (AAPL).

KPIs to be analysed:

Revenue, Subscribers, Average Revenue per User (ARPU), Churn, Customer Lifetime Value (CLTV).

Data is drawn from publicly available industry sources between 2018 and 2024.

Data Sources:

- Macrotrends, Business of Apps, GrowthDevil, DemandSage
- Churn estimates based on published rates (Antenna, Churnkey, etc.)

Key Takeaways: What the Data tells us

In the recent seven years, the streaming landscape has shifted dramatically, not just in subscriber counts, but in how platforms generate and retain value.

Market Share

- Netflix leads not just because it was first, but because it stayed focused, went global, and didn't blink.
- Amazon is winning by *not playing the same game*. It's growing a streaming empire without asking users to even buy it.
- Disney+ is growing its revenue steadily, WBD is holding its ground without a significant momentum, and Apple TV+ is still searching for a breakout moment.

Retention & Churn

- Amazon keeps churn at the single digits consistently by bundling Prime Video into a sticky, multi-benefit subscription.
- Netflix and WBD manage moderate churn, while Disney+ and Apple TV+ seem to struggle keeping their users on the platform.

Value Creation (ARPU & CLTV)

- Amazon spiked ARPU in 2024 through ads and paid upgrades without raising base fees.
- Netflix holds strong ARPU by keeping users loyal despite higher prices.

Summary

- The streaming market is evolving from a race for subscribers to a battle for value.
- Netflix leads through global consistency and user loyalty, while Amazon climbs fast by monetizing a bundled audience.
- Apple and Disney+ chase profitability with price hikes, but struggle to hold attention.
- WBD holds steady but lacks momentum.
- In the end, platforms that balance scale, retention, and pricing power will prevail. So far, they seem to be Netflix and Amazon Prime Video.
